PALGRIP®

To support customers in optimising their logistics processes, we have developed the Palgrip® anti-slip coating and equipped some of the pallets from their own range with the unique solution – on the top deck and/or under the runners. Palgrip® pallets are available as standard or tailored to customer needs.

Thanks to the excellent slip resistance of Palgrip® pallets, a high level of load security is guaranteed in all logistics processes, whether up in high racks, on turntables, on roller or chain conveyors. Even in an inclined position, the load remains safely on the pallet.

IP-TC Palgrip®

Palgrip

QUALITY TESTING PROCEDURES

All our plastic pallets are tested in our fully equipped test laboratory, in order to ensure that our customers receive high quality only. The pallets are tested according to ISO 8611 and the following internal control criteria:

- General appearance, quality of manufacture
- Weight and main dimensions
- Corner Drop Test :
Drop tests from various heights up to 4 m at +25°C, +40°C and -20°C
- Roller conveyor test with a load of 1000kg over a distance of 60 km
- Forklift test (impact test)
- Ball drop test at -20°C, with a weight of 5kg dropped from a height of 1.5 m
- Dimensional stability during change of temperature
- Wetting agent bath for ageing simulation and for testing the quality of the PE
- Internal pressure test
- Bond strength test of runners/feet:
Lifting the runners with the forks of a pallet truck at room temperature and at -20°C
- Deflection test: duration 48 and/or 100 hours

INDIVIDUALITY AS NEW STANDARD

TAILOR-MADE PLASTIC PALLETS

Today, smooth processes need maximum flexibility. Our answer: high quality plastic pallets in various special sizes. We would be happy to provide you with a custom-fit solution to your individual requirements – fast and in first-class quality.

The butt welding process enables us to produce numerous special designs in premium quality, such as the following:

- Extensions on one side (length or width)
- Enlargement on both sides, symmetrical (length or width)
- Reduction on one or both sides, symmetrical (length or width)
- Additional rims and edges

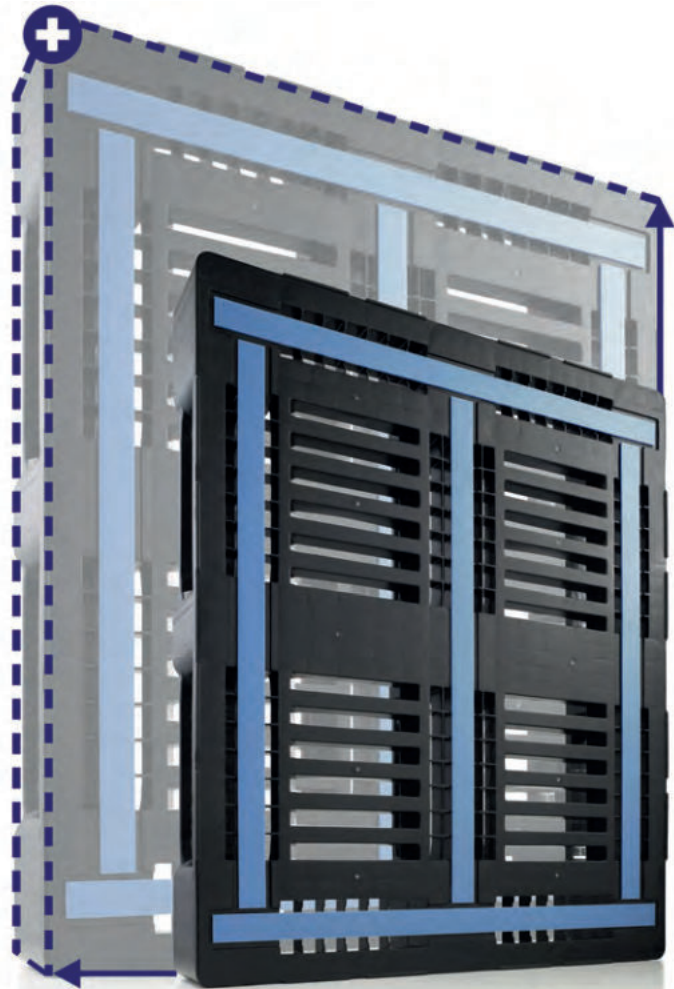

Individual pallet size up to 3000 x 3000mm

< IP-D3 1400 X 1000

< IP-CR1 1400 X 800

OUR VALUES, OUR COMPETENCES

Customer satisfaction

Making pallets is our business but adding value to your supply chain is our goal. We put all our skills at your service in a relationship of trust that is essential for a long-term partnership.

Environmental commitment

Our pallets are 100% recyclable. We take back your pallets at the end of their life and manufacture our own compound. The load bearing capacities of pallets made from compound are identical to those made of virgin material.

IP-Group, Skallabackavägen 24, SWEDEN

QUALITY YOU CAN RELY ON

A wide variety of industries put their trust in the quality and reliability of IPG pallets, boxes and containers. Among these are food, retail & wholesale, automotive, construction, pharmaceutical, chemical and clean room industries.
